Client/Company Background

Lotus Arts De Vivre

Lotus Arts de Vivre creates lifestyle and exquisite jewelry using tradition of artistry and craftsmanship tools, techniques and skills

Webvisions' Hosting Solution Chose Webvisions for

Dedicated servers, Managed firewall, SecureGuard, daily and Veritas backup
Cost-Effective, Excellent Service, Quick Response Time, Quality Services

Through lotus arts' database servers, it can monitor and maintain their international client base.

Lotus Arts de Vivre is Thailand's answer to Tiffany's and Cartier, but with a very Asian twist. In only a short span of time, Lotus Arts has claimed the all-important niche in the world of jewelry and fine home accessories with its well-known exquisite workmanship and quality materials. This pride in their products has led to stringent standards for a hosting partner when Lotus Arts decided to bring their business online. To support a sprawling network of clientele from USA, Europe, Cambodia, Japan, Thailand, Singapore and Hong Kong, Lotus Arts chose Webvisions as it felt that it could provide attention to detail, 24 x 7 technical support and a complex hosting solution that includes daily backup, 2 dedicated servers, a managed firewall, and disaster recovery.

Upon logging into lotusartsdevivre.com, clients may log in to access their account information or buying page.

"As our website content is ever growing while our merchandise range expands, we need speed and bandwidth that also grows with our requirements. We have found that Webvisions' also provides the following: Site Maintenance, Data Backup System, failover support and Security", said Kalpesh Popat, I.T Consultant, Lotus Arts de Vivre (S) Pte Ltd

Also, because the website is image-heavy, more speed and bandwidth was required. Webvisions rose to this challenge and helped ensure that the uptime and surfing speed would not be compromised in spite of hosting the main website in Singapore. The multi-homed data center connectivity of Webvisions meant that Lotusartdevivre.com would have multiple connections and less latency.

"Besides the corporate website, our company also relies on Webvisions for Application Hosting, Database Hosting, Report Service, and Backup Systems; to be used by the employees of Lotus Arts de Vivre. Webvisions provides excellent support and maintenance facility to achieve the above", said Kalpesh Popat.

Security was also a consideration for Lotus Arts. With more than 50 different, copyrighted designs on the website, Lotus Arts needed to ensure that there was no malicious activity or unauthorized use of their art.

As the site also contained confidential client information, a managed firewall was set up by Webvisions and SecureGuard was also added to pre-empt attacked with updated patches and reports. This service provides proactive solutions to security concerns and allows Lotus Arts to focus on their core business.
